# Preface

## Description

This course covers programming using the SAS statistical software package, and it provides an introduction to data analysis stressing the implementation using SAS.

Topics include two main parts:

- 1) **SAS Programming:** data management and manipulation, basic procedures, macro programming;
- 2) **Data Analysis:** descriptive statistical analysis, one- and two-sample inference, basic categorical data analysis, regression analysis, and other selected topics.

## Prerequisites

MATH 4544/6544, or equivalent.

## Instructor

[Chi-Kuang Yeh](#), I am an Assistant Professor in the Department of Mathematics and Statistics, Georgia State University.

- Office: Suite 1407, 25 Park Place.
- Email: [cych@gsu.edu](mailto:cych@gsu.edu).

## Office Hour

TBA

## Grade Distribution

- TBA

## Assignment

□ TBA

## Midterm

□ TBA

## Topics and Corresponding Lectures

Those chapters are based on the lecture notes. This part will be updated frequently.

Topic	Lecture Covered
Introduction to SAS and modules	1–

## Recommended Textbooks

- [Statistics 480: Introduction to SAS](#), The Pennsylvania State University.
- [SAS Training](#), SAS Institute.
- [SAS Resources](#), University of California, Los Angeles.

# 1 Introduction

The posterior distribution is obtained from the prior distribution and sampling model via *Bayes' rule*:

$$p(\theta \mid y) = \frac{p(y \mid \theta)p(\theta)}{\int_{\Theta} p(y \mid \tilde{\theta})p(\tilde{\theta})d\tilde{\theta}}.$$

This is a book created from markdown and executable code.

See Knuth (1984) for additional discussion of literate programming.

## 1.1 Why Bayesian?

---

## 2 Course Topics and Schedule

Week	Topics	Key Concepts / Readings	Computing Focus
1	Introduction to Bayesian Thinking	Bayesian vs. Frequentist paradigms; Prior, likelihood, posterior	Review of R basics and reproducible workflows
2	Bayesian Inference for Simple Models	Conjugate priors, Beta-Binomial, Normal-Normal, Poisson-Gamma	Simulating posteriors, visualization
3	Prior Elicitation and Sensitivity	Informative vs. noninformative priors, Jeffreys prior	Prior sensitivity plots
4	Monte Carlo Integration	Law of large numbers, sampling-based inference	Random sampling and Monte Carlo approximation
5	Markov Chain Monte Carlo (MCMC)	Metropolis-Hastings, Gibbs sampler	Implementing MCMC in R
6	Convergence Diagnostics	Trace plots, autocorrelation, Gelman–Rubin statistic	<code>coda</code> , <code>rstan</code> , and <code>bayesplot</code> packages
7	Hierarchical Bayesian Models	Partial pooling, shrinkage, multilevel structures	<code>rstanarm</code> / <code>brms</code>
8	Midterm Project: Bayesian Linear Regression	Posterior inference for regression, model selection	<code>brms</code> , <code>rstanarm</code> , custom Gibbs samplers
9	Bayesian Model Comparison	Bayes factors, BIC, DIC, WAIC, LOO	Practical comparison via cross-validation
10	Model Checking and Diagnostics	Posterior predictive checks, residual analysis	<code>pp_check</code> in <code>brms</code>
11	Advanced Computation	Hamiltonian Monte Carlo (HMC), Variational Inference	Using <code>Stan</code> and <code>CmdStanR</code>
12	Bayesian Decision Theory	Utility functions, decision rules, loss minimization	Simple decision problems in R

Week	Topics	Key Concepts / Readings	Computing Focus
<b>13</b>	Modern Bayesian Methods	Approximate Bayesian computation (ABC), Bayesian neural networks	Examples via <code>rstan</code> or <code>tensorflow-probability</code>
<b>14</b>	Student Project Presentations	Applications and case studies	Full workflow demonstration in R
